

Shopify Store Blueprint — onlykw.com

Premium desserts, confectionery & edible gifting · Kuwait-first, GCC-ready

Version 1.0 · 2026-10-08 · Companion to `COMPETITOR_PLATFORM_AND_UX_ANALYSIS.md`

0. Architecture Principles

#	Principle	Why (competitor evidence)
P1	Mobile in-app browser first. Design and test in the Instagram/Snapchat webviews on a mid-range Android over 4G.	GCC dessert demand is paid-social-led. Every top regional player is mobile/app-first (Floward, Bleems, Crumbl).
P2	The delivery promise is a product attribute, not a banner. Every SKU carries its fulfilment mode and lead time; the UI only promises what the cart can actually deliver.	Fantastic Chocolate's "90 min" banner vs "order ice-cream cakes a day ahead" is a trust leak.
P3	Native Shopify first, apps second. Use Search & Discovery, Markets, Translate & Adapt, Shopify Functions discounts and native metafields/metaobjects before adding apps. Cap at ≤ 8 storefront-loading apps .	Speed. Shopify stacks win on theme + few apps (Milk Bar, Magnolia, Salt & Straw).
P4	Phone number is the customer ID. WhatsApp is the GCC's SMS. Capture the phone at every step and use it for tracking, loyalty and winback.	Salt & Straw phone-based loyalty; Floward/Bleems app tracking.
P5	Arabic is a first-class language , not a translation layer. Arabic RTL is the default for Kuwaiti traffic; English LTR is secondary.	Ad copy, search queries and gifting notes are predominantly Arabic.

0.1 Shopify plan decision

Plan	Fit	Notes
Grow (recommended for MVP)	✓	Enough staff seats and reports. Delivery date, slot and gift data are captured in the cart (cart attributes), which works on every plan.
Advanced	Upgrade trigger: ~15K KWD+/month GMV	Lower third-party transaction fee; custom reports.
Plus	Phase 3+ only if needed	Unlocks Checkout UI extensions on the information/shipping/payment steps, custom-app Shopify Functions, B2B (corporate gifting catalogs) and the lowest third-party fee.

⚠️ **Shopify Payments is not available in Kuwait.** All card/KNET payments run through a third-party gateway, so **Shopify's third-party transaction fee applies** on top of gateway fees. It decreases by plan tier (Basic highest → Plus lowest; verify current rates in Shopify admin). Model this into the plan decision.

1. Theme Selection & Tech Stack Architecture

1.1 Theme recommendation

Primary pick: Prestige (Maestrooo, OS 2.0) Fallback: Impulse (Archetype) Budget/dev-heavy alternative: Dawn (free) + custom sections

Criterion (weight)	Prestige	Impulse	Symmetry	Dawn
High-end visual storytelling (25%)	★★★★★ editorial layouts, image-with-text overlays, video sections, luxury typography	★★★★	★★★	★★★
Mobile speed out of the box (20%)	★★★★	★★★★	★★★	★★★★★
Dense catalog & filtering (15%)	★★★★ native Search & Discovery filters, mega menu	★★★★★ promo tiles, mega menu, strong collection grids	★★★★★ catalog-first	★★★
Cart drawer + upsell slots (15%)	★★★★ drawer with recommendations	★★★★	★★★★	★★★
PDP flexibility (variant swatches, blocks, sticky ATC) (15%)	★★★★	★★★★	★★★★	★★★ (needs dev)
Gifting/occasion merchandising (10%)	★★★★	★★★★★ promotional, event-driven	★★★	★★
Weighted fit	4.3	4.2	3.8	3.3

Why Prestige:

- **Look:** Only's competitive slot sits between *Mirzam/Bateel luxury* and *Fantastic Chocolate's catalog-and-promo* style. Prestige gives the luxury editorial look (Mirzam, Milk Bar-style hero storytelling) while handling a 30-80 SKU catalog with occasion collections.
- **Performance:** Maestrooo themes are well maintained and perform consistently.

Non-negotiable acceptance tests before purchase (run on the theme demo + a trial store):

1. Arabic RTL:

- Switch the store language to Arabic.
- Verify mirrored layout: drawer opens from the left, carousels reverse, icons flip.
- Verify Arabic font rendering and that numbers stay LTR in prices ("7.750 د.ك").

2. **KWD 3-decimal pricing** renders correctly in product cards, cart and drawer.
3. **Lighthouse mobile ≥ 70** on the demo PDP with your own hero images.
4. **Cart drawer** exposes an app block/slot for a progress bar and upsells.
5. **Variant picker** supports custom labels (for "Large · serves 10-12").

If Arabic RTL fails any test → choose the theme that passes. RTL quality outranks every other criterion for this market.

Customisation layer (sections/blocks to build on top of the theme; ~8-12 dev days):

- delivery-mode-selector
- drop-showcase
- servings-variant-picker
- storage-badges
- attach-rail
- whatsapp-cta
- lead-time-resolver (cart drawer)
- gift-flow steps

1.2 Tech stack overview

STOREFRONT (Prestige OS 2.0, AR-RTL / EN-LTR)
Custom sections: delivery-mode · drop-showcase · servings picker · attach rail · lead-time resolver
Native: Search & Discovery (filters, complementary products) · Translate & Adapt · Markets (KWD)
Apps (storefront): Zapiet (date/slot) · UpCart→Rebuy (drawer/upsell) · Judge.me (reviews) · Loyalty
CHECKOUT (Shopify, phone-first contact)
Gateways: Tap Payments (KNET, Apple Pay, cards) – backup MyFatoorah · BNPL: Tabby / Deema · COD (rules)
Discounts: Shopify Functions (automatic GWP, tiered, bundles)
MESSAGING & CRM
Klaviyo (email + WhatsApp + SMS fallback, reviews sync) · WhatsApp Business API (Meta-verified)
DATA & ADS
GA4 (Google & YouTube app) · Meta CAPI (Facebook & Instagram app) · Snapchat Ads app · TikTok app
Microsoft Clarity (session recording) · Shopify Analytics
OPERATIONS
Order printer / kitchen tickets · Zapiet dispatch calendar · driver ETA link → WhatsApp

1.3 Kuwait & GCC payments stack

Layer	Primary	Backup / add-on	Integration route	Notes
KNET (debit, ~majority of KW online payments)	Tap Payments Shopify app	MyFatoorah or Hesabe or UPayments Shopify apps	Offsite payment app (Shopify Payments Apps API)	Set KNET as the first method in the checkout payment order.
Apple Pay	Tap (inside Tap's hosted step)	MyFatoorah	Same gateway	Shopify's native express Apple Pay button needs Shopify Payments (not in KW). So Apple Pay appears after "Pay with Tap", not as a top-of-checkout express button. Mention it in the PDP/cart trust row ("KNET · Apple Pay · Visa/MC").
Credit/debit cards (Visa/MC/Amex)	Tap	MyFatoorah	Same gateway	Enable 3-D Secure.
BNPL	Tabby (Shopify app; confirm KWD merchant onboarding)	Deema (Kuwait-native BNPL), Tamara (confirm Kuwait availability for your entity), Taly	Offsite payment app	Show only on carts ≥ 15 KWD , using a checkout payment-customization Function where the plan/app allows; else accept on all orders. PDP widget: "Split into 4 payments of 3.875 KD".
Cash on Delivery	Shopify manual payment method	—	Native	Restrict: express/same-day only, max 30 KWD, not for gifts to third-party recipients (collection risk), first-order cap. Use a payment-customization app/Function to hide COD per rules.
GCC expansion	Tap (Mada/KSA, Benefit/Bahrain, NAPS/Qatar)	MyFatoorah	Same	Add with Markets expansion (Phase 3+).

Gateway selection checklist:

- ☐ KWD settlement account + KNET merchant ID issued
- ☐ Settlement cycle (T+1 / T+2) and per-transaction fees (KNET is typically flat-fee; cards are a percentage) compared across Tap, MyFatoorah and Hesabe
- ☐ Refund API supported from Shopify admin (partial refunds for damaged items)
- ☐ Hosted page supports Arabic and mobile; test the in-app-browser redirect return (**the #1 checkout drop-off in Kuwait**)
- ☐ Webhook reliability: order is not marked paid if the customer closes the tab after KNET success. Test 20 transactions.

1.4 App ecosystem (lean & high-performance)

Job	Recommended	Alternatives	Phase	Load budget / notes
Delivery date, slot & cutoffs	Zapiet - Pickup + Delivery	Bird: Delivery Date & Time, DingDoong, Stellar Delivery Date	1	Supports product-level lead times, blackout dates, per-slot capacity, same-day cutoffs, distance/zone rules, cart-page widget (works on non-Plus). Kuwait has no reliable postal codes: configure distance-radius zones from the kitchen, or area lists via custom address fields.
Cart drawer + upsell + progress bar	UpCart (lean, Phase 2) → Rebuy (Phase 3 if AI recs/post-purchase pay off)	Monster Upsell, theme-native drawer + custom section	2	One drawer app only. Never stack two drawer apps.
Filters & recommendations	Shopify Search & Discovery (free, native)	Boost Commerce (if catalog > 200 SKUs)	1	Metafield-driven filters; complementary products feed the attach rail.
Reviews (photo/video)	Judge.me (Awesome plan)	Loox (photo-led), Okendo (Plus-grade)	1	Lightweight. Supports Arabic review widgets, review requests and Klaviyo sync.
Localization	Shopify Markets + Translate & Adapt (free)	Weglot / Langify (only if machine translation workflow needed)	1	Arabic /ar subfolder, hreflang automatic. Human-translate all PDP and checkout copy.
Email + WhatsApp + SMS	Klaviyo (email, WhatsApp, SMS)	Zoko / WATI / Interakt (WhatsApp BSP) + Klaviyo email	1 (transactional), 2 (flows)	Meta Business verification and template approval needed (see agency klaviyo-whatsapp-architect SOP).
Loyalty & referral	Rivo or BON Loyalty	Smile.io, Yotpo Loyalty	3	Must support phone-number identity, points-as-KWD display and Klaviyo sync.
Discounts / GWP / bundles	Native Shopify Functions discounts (automatic Buy X Get Y, amount-off with minimum, combinations) + Shopify Bundles app	Fast Bundle (if mix-and-match UI needed)	2	Native: zero storefront JS.
Payments customization (hide COD/BNPL by rule)	Payment-customization Function app (e.g. HidePay / Payfy)	—	2	Rules by cart value, delivery mode, gift flag.
Analytics/pixels	Google & YouTube, Facebook & Instagram (CAPI), Snapchat Ads, TikTok (native channel apps) + Microsoft Clarity	—	1	Use Shopify Customer Events (web pixels): sandboxed, no theme bloat.
Order ops	Shopify Order Printer (kitchen ticket) + Zapiet dispatch calendar	—	1	Ticket prints delivery date/slot, gift note and recipient.

App performance budget:

- ≤ 8 apps injecting storefront JS.
- Total third-party JS ≤ 250 KB compressed.
- Re-test Lighthouse after every app install; uninstall residue code (old app snippets in `theme.liquid`).

2. Information Architecture & Navigation

2.1 URL & collection architecture

```
/ (AR default for KW visitors) · /en (English)
/collections/cakes                /collections/occasion-birthday
/collections/ice-cream            /collections/occasion-ramadan-eid
/collections/bites                /collections/occasion-corporate
/collections/chocolates           /collections/occasion-gatherings (ghabga / diwaniya / guests)
/collections/cookies-confections /collections/same-day-delivery (smart: fulfillment_mode ∈ express,same_day)
/collections/gift-boxes           /collections/drops (current monthly drop + archive)
/collections/best-sellers         /collections/under-10-kd (smart: price < 10.000)
/pages/corporate-gifting · /pages/catering · /pages/delivery-areas · /pages/only-club · /blogs/journal
```

Smart collections run on **tags/metafields**, so merchandising never needs manual curation:

- Product tags `mode:express`, `mode:same_day`, `mode:preorder`
- `occasion:birthday`, ...
- `diet:eggless`, ...

2.2 Header & menu structure (mobile-first)

Announcement bar (rotating, max 2 messages) → **Header:**  ·  ·  ·  ·  (cart count) → **Delivery-mode pill** under the header:  Deliver today · until 9 PM ⇌  Schedule for later

Mobile menu (drawer, opens from the right in AR / left in EN):

Level 1	Level 2	Notes
☞ Same-Day Delivery	All same-day · Express 90 min	Top item. Highest-intent journey (Bleems model).
Shop by Category	Cakes · Ice Cream & Bites · Chocolates · Cookies & Confections · Gift Boxes	Each with a thumbnail tile

Level 1	Level 2	Notes
Shop by Occasion	Birthday · Gatherings (Ghabga/Diwaniya) · Ramadan & Eid · National Day · Thank You · Corporate	Seasonal items auto-hide off-season via metaobject <code>active</code> flag
 This Month's Drop	Current drop · Coming next · Drop archive	Badge "NEW"
Best Sellers	—	
Corporate & Catering	Corporate gifting · Events & catering · Bulk order form	WhatsApp CTA
Only Club	Points & rewards · Refer a friend	Phase 3
Footer links in drawer	Delivery areas & times · Track order (WhatsApp) · العربية / English toggle	

Desktop mega menu: 4 columns: Category · Occasion · Delivery (Today / Schedule) · Featured tile (current drop image + CTA).

Search:

- Predictive search (native) with product, collection and page results.
- Synonyms configured in Search & Discovery: bilingual and dialect.

Query	Maps to
منقا / مانجا / مانجو / mango	mango
ككة / ككة / cake	cakes
بايتس / قضيمات / bites	bites
حلى / حلويات / dessert	all
هدايا / هدية / gift	gift boxes
تيراميسو / tiramisu	tiramisu

2.3 Faceted search & filter tree (Search & Discovery)

Filter	Source	Values (EN / AR)	Type
Delivery availability	<code>custom.fulfillment_mode</code> (list)	Express 90 min / ٩٠ دقيقة خلال · توصيل خلال ٩٠ دقيقة · نفس اليوم / Same day · Pre-order / طلب مسبق	Multi-select, pinned first

Filter	Source	Values (EN / AR)	Type
Price	Native price	Under 10 KD · 10–20 KD · 20+ KD	Price-range buckets (custom labelled via collection links if needed)
Category	Product type	Cakes · Ice Cream & Bites · Chocolates · Cookies · Gift Boxes	Multi-select
Occasion	custom.occasions (list of metaobject refs)	Birthday · Gatherings · Ramadan · Corporate · Thank you	Multi-select
Serves	custom.servings_band	1–3 · 4–6 · 7–10 · 10+	Multi-select
Dietary	custom.dietary (list)	Eggless · Gluten-free · Vegan · Nut-free · Sugar-reduced	Multi-select
Flavor	custom.flavor_family (list)	Mango · Chocolate · Coffee/Tiramisu · Nutella · Fruit · Saffron/Rose	Multi-select
Storage	custom.storage_temperature	Ambient · Chilled · Frozen	Multi-select (helps the gift buyer)
Availability	Native	In stock	Toggle

Rules:

- Hide a filter value if fewer than 2 products use it.
- Sort default = "Best selling".
- Collection pages show **servings + price-per-person** on cards.

3. High-Converting Page Layout Specifications

3.1 Homepage wireframe logic (mobile)

#	Section	Content & logic	Component
1	Dynamic announcement bar	Time-aware copy from the settings.delivery_rules metaobject. Examples below the table.	announcement-countdown (custom, timezone Asia/Kuwait)
2	Header + delivery-mode pill	Selecting a mode persists in localStorage + cart attribute _delivery_mode and pre-filters collections.	delivery-mode-selector
3	Hero (9:16-friendly video or image, ≤ 150 KB poster)	Headline + 2 CTAs: "Deliver Today" / "توصيل اليوم" → /collections/same-day-delivery , "Schedule a Gift" / "جدول هدية" → gift flow.	Theme slideshow/video + custom CTA block
4	Shop by need tiles (2×2)	Same-day · Birthday · Gatherings · Gift Boxes	Collection list

#	Section	Content & logic	Component
5	Best-seller rail	6-8 products; cards show servings, price, "< Today" badge if express-eligible, quick-add	Featured collection + card badges
6	This Month's Drop showcase	Driven by drop metaobject: name, hero, countdown to end date, "Get early access on WhatsApp" if status = upcoming	drop-showcase
7	Gathering Boxes (bundles)	3 boxes: Diwaniya / Ghabga / Guests with "Serves X · from Y KD"	Native Bundles + collection
8	Why Only trust strip	Delivered cold · Fresh daily · KNET & Apple Pay · 4.8★ reviews	Icon row (storage-badges reused)
9	Reviews / UGC	Judge.me carousel with photo reviews	App block
10	Corporate & catering banner	"Ordering for 20+?" + WhatsApp CTA	whatsapp-cta
11	Footer	Delivery areas & hours, payment icons (KNET, Apple Pay, Visa, MC, Tabby), language toggle, WhatsApp, Instagram/Snap/TikTok	Theme footer

Announcement bar copy (section 1):

- Before cutoff: 🚚 Order in 2h 14m for delivery today / اطلب خلال ٢:١٤ ساعة ويوصلك اليوم
- After cutoff: 🚫 Today's slots are full. Schedule for tomorrow from 12 PM
- Second message: free-delivery threshold.

3.2 PDP anatomy (top → bottom, mobile)

#	Block	Spec
1	Media gallery	First slide = 9:16 video (autoplay muted, loop, poster image). Then 4-6 images (cross-section, serving shot, packaging, scale with hand). Pinch-zoom.
2	Title + rating	Judge.me stars (link to reviews) + "🔥 Sold 120 this week" (optional, only if true; from order data)
3	Price	7.750 ج.د + price per person (≈ 0.86 KD / person) computed from variant.metafields.custom.servings_max
4	Servings-per-size variant switcher	Pill buttons, each showing size, servings and price. Examples below the table. Data: variant metafields (schema §3.5).
5	Delivery availability line	Logic below the table. Rendered from custom.fulfillment_mode + custom.lead_time_hours + live cutoff.
6	Add to cart (sticky on scroll) + qty	Sticky bar shows variant + price + ATC
7	Payment row	KNET · Apple Pay · Visa/MC icons + Tabby widget (if cart ≥ 15 KD)
8	Attach rail ("Make it a gift")	Greeting card (custom message) · Candles · Gift bag · "Happy Birthday" topper · Add 6 cookies. Source: Search & Discovery complementary products. 1-tap add; card opens a message sheet (line-item properties).

#	Block	Spec
9	Storage & handling badges	Badges below the table. From <code>custom.storage_temperature</code> , <code>custom.shelf_life_hours</code> , <code>custom.serving_instructions</code> .
10	Tabs/accordions	Description · Ingredients & allergens (<code>custom.allergens</code>) · Delivery & areas · Storage
11	WhatsApp CTA	"Custom size or catering? Chat with us" → <a href="https://wa.me/965XXXXXXX?text=<prefilled: product title + URL>">https://wa.me/965XXXXXXX?text=<prefilled: product title + URL> (localized)
12	Reviews	Judge.me photo/video reviews
13	"Complete the gathering"	Complementary rail (bites + cookies)

Variant pill examples (block 4):

- Small · serves 4–6 · 5.950 KD
- Large · serves 10–12 · 9.750 KD
- Party · serves 20+ · 17.500 KD

Delivery availability logic (block 5):

- < Express: arrives in 90 min if ordered before 9 PM
- 🚚 Same-day: order before 4 PM
- 📅 Pre-order: earliest delivery Thu 10 Oct (lead time applied)

Storage badges (block 9):

- ❄️ Delivered frozen. Keep in freezer
- 🧊 Keep chilled 2–6°C
- ⌚ Best within 48h
- ✅ Arrives perfect or we replace it (**Only Promise**, Salt & Straw "Melt-Free" model)

3.3 Slide-out cart drawer UX

Your order (3) × 7  Add 2.250 KD for FREE delivery 🚚 ⚠ Mixed delivery windows Mango Ice-Cream Cake is pre-order (24h). [Deliver all on Thu 10 Oct] [Split: +1.5KD] [img] Mango Cake · Large · serves 10–12 9.750 KD [-] 1 [+] 🗑 🎁 Card: "Happy birthday Noura..." 🔒 Make it a gift: [📦 0.500] [💖 1.000] [👤 0.750] ← attach rail (1-tap)  Delivery: Today · 6–8 PM (change)  Sending to someone else? [toggle] Subtotal 12.750 KD · Delivery calc. next [Checkout · KNET · Apple Pay]	← tier 1: free delivery @ 15 KD ← tier 2: free chocolate box @ 25 KD ← lead-time resolver (only when conflict) ← Zapiet cart widget (date+slot) ← opens gift flow \$4.1
---	--

Progress bar rules:

Tier	Threshold	Reward	Mechanism
1	15.000 KD	Free delivery	Shipping rate condition (free rate $\geq$ 15 KD) or a free-shipping discount Function
2	25.000 KD	Free chocolate box (or 6 cookies)	Automatic Buy X Get Y discount (min purchase amount $\rightarrow$ gift product at 100% off); gift auto-added by the drawer app

Copy (AR/EN):

- باقي 2.250 د.ك وتحصل توصيل مجاني
- Add 2.250 KD for free delivery
- After tier 2: 🍫 Free chocolate box unlocked

Thresholds are set by the margin model (see Phase 2). Start at $\sim 1.35\times$ current AOV.

Lead-time conflict resolver (logic):

```

modes    = set(line.product.metafields.custom.fulfillment_mode for line in cart)    # express | same_day | preorder
temps    = set(line.product.metafields.custom.storage_temperature for line in cart) # ambient | chilled | frozen
maxLead  = max(line.product.metafields.custom.lead_time_hours)

IF "preorder" in modes AND ("express" in modes OR "same_day" in modes):
    show warning: "{preorder item} needs {maxLead}h. Choose:"
        [A] Deliver everything together on {earliest date ≥ now + maxLead}    → sets cart attr _delivery_plan=consolidated
        [B] Split into two deliveries (+{split_fee} KD)                      → _delivery_plan=split (Phase 3; ops approval)
    lock Zapier calendar min-date = now + maxLead when [A]

IF "frozen" in temps AND "ambient" in temps:
    info note: "Frozen items travel in an insulated box, all arrive together."

IF chosen slot is express AND any line not express-eligible:
    auto-downgrade to the next valid slot + toast explaining why

```

Server-side safety net (prevents bad orders if the JS is bypassed):

- A **Cart & Checkout Validation Function**, via a public app or custom app on Plus, rejects checkout when `_delivery_date < now + maxLead`.
- On non-Plus, Zapier's own min-date enforcement plus an order-tag webhook alert to ops is the fallback.

3.4 Collection page

- 2-column mobile grid.
- Cards: image (hover/second image = cross-section), title, servings, price,  badge, quick-add.
- Sticky filter/sort bar.
- Pinned "Delivery availability" filter.
- Banner slot mid-grid for the drop or a bundle.

3.5 Data schema: metafields & metaobjects

Product metafields (namespace `custom`):

Key	Type	Example	Used by
<code>fulfillment_mode</code>	<code>list.single_line_text_field</code> (choices: <code>express</code> , <code>same_day</code> , <code>preorder</code>)	<code>["same_day", "preorder"]</code>	Filters, badges, resolver, smart collections

Key	Type	Example	Used by
lead_time_hours	number_integer (min 0, max 168)	24	Resolver, Zapiet sync, PDP line
storage_temperature	single_line_text_field (choices: ambient, chilled, frozen)	frozen	Badges, resolver, filters
storage_temp_range	single_line_text_field	-18°C / 2–6°C	Badges
shelf_life_hours	number_integer	48	Badges ("Best within 48h")
serving_instructions	multi_line_text_field (translatable)	Take out 15 min before serving	Storage tab
allergens	list.single_line_text_field (choices: milk, egg, gluten, nuts, soy, sesame)	["milk", "gluten"]	Allergen tab, compliance
dietary	list.single_line_text_field (choices: eggless, gluten_free, vegan, nut_free, reduced_sugar)	["eggless"]	Filters
flavor_family	list.single_line_text_field	["mango"]	Filters, recs
occasions	list.metaobject_reference → occasion	[gid://.../Metaobject/1]	Occasion collections, filters
servings_band	single_line_text_field (choices: 1-3, 4-6, 7-10, 10+)	7-10	Filters (product-level summary)
express_eligible	boolean	true	✂ badge, express slot gating
gift_wrappable	boolean	true	Attach rail visibility
video_9x16	file_reference (video)	—	PDP first slide
drop	metaobject_reference → drop	—	Drop badge/countdown

Variant metafields (namespace custom):

Key	Type	Example
servings_min	number_integer	10
servings_max	number_integer	12
size_label	single_line_text_field (translatable)	Large / كبير
weight_grams	number_integer	1800
diameter_cm	number_integer	24

Metafield definition example (Admin GraphQL, `metafieldDefinitionCreate`):

```
mutation {
  metafieldDefinitionCreate(definition: {
    name: "Storage temperature"
    namespace: "custom"
    key: "storage_temperature"
    ownerType: PRODUCT
    type: "single_line_text_field"
    validations: [{ name: "choices", value: "[\"ambient\", \"chilled\", \"frozen\"]" }]
    access: { storefront: PUBLIC_READ }
    capabilities: { adminFilterable: { enabled: true } }
  }) { createdDefinition { id } userErrors { field message } }
}
```

```
mutation {
  metafieldDefinitionCreate(definition: {
    name: "Servings (max)"
    namespace: "custom"
    key: "servings_max"
    ownerType: PRODUCTVARIANT
    type: "number_integer"
    validations: [{ name: "min", value: "1" }, { name: "max", value: "200" }]
    access: { storefront: PUBLIC_READ }
  }) { createdDefinition { id } userErrors { field message } }
}
```

Liquid: servings-aware variant pill + price per person:

```
{%- for variant in product.variants -%}
  {%- assign smin = variant.metafields.custom.servings_min.value -%}
  {%- assign smax = variant.metafields.custom.servings_max.value -%}
  <label class="servings-pill" for="v-{{ variant.id }}">
    <input type="radio" id="v-{{ variant.id }}" name="id" value="{{ variant.id }}"
      {% if variant == product.selected_or_first_available_variant %}checked{% endif %}
      {% unless variant.available %}disabled{% endunless %}>
    <span class="servings-pill__size">{{ variant.metafields.custom.size_label.value | default: variant.title }}</span>
    <span class="servings-pill__serves">{{ 'products.serves' | t: min: smin, max: smax }}</span>
    <span class="servings-pill__price">{{ variant.price | money }}</span>
    {%- if smax > 0 -%}
      {%- assign pp = variant.price | divided_by: smax | money -%}
      <span class="servings-pill__pp">{{ 'products.per_person' | t: price: pp }}</span>
    {%- endif -%}
  </label>
{%- endfor -%}
```

Locale keys:

- en.default.json: "serves": "serves {{ min }}–{{ max }}"
- ar.json: "serves": "أشخاص {{ min }}–{{ max }} يكفي"

Metaobject definitions:

Metaobject	Fields
drop	name (text, translatable) · slug · status (upcoming/live/ended) · starts_at (date_time) · ends_at (date_time) · hero_image (file) · hero_video (file) · products (list.product_reference) · early_access_segment (text: Klaviyo segment id) · teaser_copy (rich text)
occasion	name · slug · icon · active_from · active_to · hero_image · collection (collection_reference)
delivery_rules (single entry)	express_cutoff (21:00) · same_day_cutoff (16:00) · opening (10:00) · closing (23:00) · friday_opening · ramadan_mode (boolean) · ramadan_hours (json) · free_delivery_threshold (15.000) · gwp_threshold (25.000) · blackout_dates (list.date)
delivery_zone	name (Salmiya, Hawalli, ...) · governorate · fee (money) · express_available (boolean) · min_order (money)

Cart attributes & line-item properties (captured in the drawer/gift flow; underscore = hidden from customer-facing cart where the theme supports it):

```

{
  "attributes": {
    "_delivery_mode": "same_day",
    "_delivery_date": "2026-10-10",
    "_delivery_slot": "18:00-20:00",
    "_delivery_plan": "consolidated",
    "_is_gift": "true",
    "_recipient_name": "Noura",
    "_recipient_phone": "+96550000000",
    "_sender_name_on_card": "Ahmad & family",
    "_hide_prices_on_slip": "true",
    "_surprise_no_call": "false"
  },
  "line_item_properties_example": {
    "Card message": "كل عام وانتي بخير 🧡",
    "Candles": "Number 3 + 0",
    "_card_design": "birthday-gold"
  }
}

```

4. Gifting & Fulfillment Workflow Engine

4.1 Recipient journey (e-gifting flow)

Triggered by **"Schedule a Gift"** (hero), **"Sending to someone else?"** (drawer toggle), or any occasion collection.

Step	Screen	Fields / UI	Validation & logic
1	Who is it for?	Toggle For me / For someone else	For someone else sets <code>_is_gift=true</code> ; COD hidden for gift orders.
2	Choose the treat	Occasion-filtered products, servings pills	Express badge only if a valid slot exists for the chosen date
3	When?	Calendar (Zapiet) with only valid dates/slots given cart lead times; slots show capacity ("2 left")	Min date = now + max lead time; blackout/Ramadan rules from <code>delivery_rules</code>
4	Make it personal	Card design (3-5 options, 0.500-1.000 KD), message (max 200 chars, AR/EN keyboard, emoji allowed), sign as name, candles/topper/balloons	Character counter; profanity filter optional; preview card render

Step	Screen	Fields / UI	Validation & logic
5	Recipient details	Recipient name · recipient phone (+965, 8 digits) · area (dropdown) · block · street · avenue (optional) · house/building · floor/apartment · Google Maps pin (optional) · delivery notes	Kuwait phone regex <code>^\+965[2569]\d{7}\$</code> ; area must be a valid <code>delivery_zone</code>
6	Surprise settings	☐ Don't call the recipient before delivery (driver contacts sender) · ☐ Hide prices on the packing slip · ☐ Send recipient a WhatsApp "a gift is on its way" message at dispatch	Stored as cart attributes
7	Checkout	Sender phone (contact), KNET/Apple Pay/cards/Tabby	Shopify shipping address = recipient. Sender = customer.
8	Post-purchase	Thank-you page: "Share the delivery link with family" · loyalty sign-up · referral	Order status page extension (all plans)

Kuwait address form mapping (Shopify address fields):

Shopify field	Kuwait use
city	Area (dropdown from <code>delivery_zone</code>)
address1	Block + Street (Block 4, Street 12)
address2	Avenue / House / Building / Floor / Apt
province	Governorate (Capital, Hawalli, Farwaniya, Ahmadi, Jahra, Mubarak Al-Kabeer)
zip	Not required
phone	Required , recipient's phone

Enable "Phone number required" for shipping addresses in checkout settings.

4.2 Cutoff & slot mechanics

Three fulfilment lanes, each with its own promise. **Never show a promise the lane can't keep.**

Lane	Eligible SKUs	Order window	Promise shown	Slot model	Capacity control
⚡ Express 90 min	<code>express_eligible = true</code> AND in stock at kitchen (ready-made, chilled/ambient, plus frozen items pre-stocked)	10:00 → 21:00 (<code>express_cutoff</code>)	"Arrives within 90 min"	Rolling ASAP slot	Max N express orders per 30 min (driver count). Auto-disable when queue is full → falls back to the next same-day slot.

Lane	Eligible SKUs	Order window	Promise shown	Slot model	Capacity control
 Same-day scheduled	<code>fulfillment_mode ∋ same_day</code>	Order before 16:00 (<code>same_day_cutoff</code>)	"Today, choose a 2- hour slot"	2-hour slots: 12-14, 14-16, 16-18, 18-20, 20-22	Capacity per slot (e.g. 15 orders); slot closes 2h before start
 Pre-order / advance bake	<code>fulfillment_mode ∋ preorder</code> (ice-cream cakes, custom/party sizes, corporate)	Any time	"Earliest delivery: {date}"	Date + 2-hour slot	Daily production cap per SKU (inventory per date via Zapier limits or a daily inventory reset)

Rule set (Zapier configuration + theme logic):

- `earliest_date = ceil(now + max(lead_time_hours of cart lines))` , rounded to the next open slot.
- The cart lane is the **slowest** item's lane, unless the customer splits (Phase 3).
- After `same_day_cutoff` , "Today" disappears from the calendar. The announcement bar switches to "Schedule for tomorrow".
- Friday & Ramadan profiles:**
 - Friday opens later.
 - Ramadan: kitchen hours shift. **Peak slot 19:00-21:00 (post-iftar)** gets extra capacity, and the **pre-iftar 17:00-18:30** "Iftar dessert" slot is a premium.
 - Switch via `delivery_rules.ramadan_mode` .
- Blackout dates** (Eid day 1, kitchen maintenance) are set from `delivery_rules.blackout_dates` .
- Peak days** (Valentine's, Mother's Day 21 Mar, National Day 25-26 Feb):
 - Pre-orders only, 48h ahead.
 - Express disabled.
 - Slot capacity raised to match extra drivers.
- Zone gating:** Express available only for zones with `express_available = true` (e.g. within ~15 km of the kitchen). Remote areas (e.g. Jahra, Ahmadi south) get same-day/pre-order only, with zone fee and minimum order.
- Trust contract:**
 - Every promise shown (bar, PDP, drawer, checkout, confirmation WhatsApp) is generated from the **same** rules object.
 - Late-delivery SLA breach → automatic apology + 1 KD credit via loyalty points (Phase 3).

Ops flow:

```
Order paid → Tag: lane:express|same_day|preorder, date:YYYY-MM-DD, slot:HH-HH, gift:yes
→ Kitchen ticket (Order Printer) with card message + candles + "hide prices"
→ Zapier dispatch calendar (per slot) → driver assigned
→ Fulfillment marked with tracking URL → WhatsApp "Out for delivery + live ETA"
→ Delivered → WhatsApp "Rate your dessert ★" (Judge.me link) + loyalty points posted
```

5. Conversion & Retention Setup (GCC Focus)

5.1 WhatsApp & SMS-first configuration

Checkout & identity:

Setting	Value
Checkout → Customer contact method	Phone number or email (phone shown first in AR/EN copy)
Shipping address phone	Required
Marketing consent at checkout	☒ "Send me offers on WhatsApp/SMS" (Shopify SMS marketing consent field → synced to Klaviyo) + ☒ email
Customer accounts	New customer accounts (one-time code). Phone-based OTP login via the loyalty app widget if needed. Accounts optional, never forced.
Phone format	E.164 +965XXXXXXXX ; normalise numbers starting with 00965 / 965 /8 digits before syncing to Klaviyo

WhatsApp Business API setup checklist (Klaviyo WhatsApp or BSP):

- ☐ Meta Business Manager verified (trade licence, matching legal name)
- ☐ Dedicated WhatsApp number (not used on the WhatsApp app); display name "Only | اونلي" approved
- ☐ Templates approved in **Arabic + English** (utility vs marketing categories set correctly):
 - `order_confirmed`
 - `out_for_delivery` (with ETA link)
 - `delivered_review_request`
 - `gift_on_its_way` (to recipient, utility)
 - `abandoned_checkout`
 - `drop_early_access`
 - `points_reminder`
- ☐ Opt-in sources: checkout checkbox, popup, loyalty sign-up, click-to-WhatsApp ads
- ☐ Quiet hours: no marketing 23:00–10:00 Kuwait time; no marketing during prayer-time peaks on Friday noon (optional brand rule)
- ☐ SMS fallback (Klaviyo SMS) for utility messages if WhatsApp undelivered

Flows (Klaviyo):

Flow	Trigger	Channel sequence	Content
Order confirmation	Placed Order	WhatsApp (utility)	Items, date/slot, gift note echo, "Track" link

Flow	Trigger	Channel sequence	Content
Dispatch & tracking	Fulfilled / Out for delivery	WhatsApp	Driver ETA link; recipient copy if <code>_is_gift</code> and allowed
Review request	Delivered + 3h	WhatsApp → email (24h)	Judge.me photo review → +points
Abandoned checkout	Started Checkout, no order	WA 30 min → email 4h → WA 20h (free-delivery nudge)	Cart contents, slot still available ("Today's 6–8 PM slot has 2 left")
Browse abandonment	Viewed Product ×2	Email 2h	Product + reviews
Welcome	Popup / consent	WA instant (code) → email series 3 msgs	Free delivery on first order, best-sellers, drop calendar
Post-purchase cross-sell	Delivered + 3 days	WA/email	"Loved the Mango Cake? Try the Bites"
Occasion reminder	Saved occasion date – 5 days	WA	Pre-built gift box + 1-tap schedule
Winback	45 / 75 days since last order	WA → email	New drop + points balance
VIP drop early access	Drop <code>status=upcoming</code> → live	WA to VIP segment 24h early	Exclusive link

Capture popup spec:

- Mobile bottom sheet, 8s delay or 40% scroll, exit-intent on desktop.
- Suppressed for purchasers and on checkout/cart.
- Offer: **free delivery on first order** (protects margin vs % off).
- Field: phone (+965 prefilled) → optional email on step 2. AR/EN.
- Target capture rate: 6–10%.

5.2 Loyalty program: "Only Club" (points as currency)

Core economics:

- **Earn:** 10 points per 1 KD spent.
- **Burn: 100 points = 1 KD** off, so points display as KWD: "You have 3.400 KD in rewards".
- Effective base reward = 10% → **adjust to margin**. Recommended base: **5 points per 1 KD = 5%**, boosted by tiers below.

Tier	Qualify (rolling 12 months)	Earn rate	Perks
 Member	Join (phone number)	5 pts / KD (5%)	Birthday treat (free bites box ≥ 10 KD order), drop alerts
 Gold	60 KD spend or 5 orders	7 pts / KD (7%)	24h early access to drops , free delivery 1×/month

Tier	Qualify (rolling 12 months)	Earn rate	Perks
 Diwaniya VIP	150 KD spend or 12 orders	10 pts / KD (10%)	Priority express slots (reserved capacity), free delivery always, off-menu VIP flavour each quarter, WhatsApp concierge line

Bonus actions:

Action	Points
Create account	200 (= 2 KD)
Add birthday + 1 occasion date	100 each
Photo review	100 · Video review 200
Referral (friend's first order $\geq$ 10 KD)	Friend gets 2 KD off; referrer gets 300 pts (= 3 KD)
Follow Instagram / Snapchat	50 each (one-time)
Late-delivery apology (SLA breach)	100 (auto)

Redemption rules:

- Min redemption 100 pts (1 KD).
- Max 30% of order value.
- Points can't be combined with the first-order free delivery offer.
- Points expire 12 months after last activity.
- **Product rewards** (Milk Bar model) as an alternative: 500 pts → free Nutella cookies (6).

Display surfaces:

- Header account icon shows points as KD.
- PDP: "Earn 39 points (0.390 KD) with this order".
- Drawer: "You have 3.400 KD in rewards. Apply".
- Thank-you page.
- WhatsApp monthly balance message.

6. Phased Implementation Roadmap

Phase 1: MVP launch (weeks 1-6)

Goal: a fast, bilingual, KNET-ready store with honest delivery promises.

Workstream	Tasks	Done when
Foundation	Shopify Grow plan · domain <code>onlykw.com</code> + 301s from old URLs (<code>/product/<cat>/<slug></code> → <code>/products/<handle></code>) and <code>onlymangokw.com</code> · store timezone Asia/Kuwait · KWD money format set to <code>{{amount}}</code> د.ك / <code>{{amount}}</code> KD , then verify fils precision (3 decimals, e.g. 7.750) renders in theme, checkout and notifications. If any surface rounds to 2 decimals, price SKUs on 0.250 KD steps and raise a Shopify support ticket.	0 broken URLs in crawl; ad links redirect correctly
Theme	Prestige install + brand tokens · RTL acceptance tests passed · custom sections: <code>servings-variant-picker</code> , <code>storage-badges</code> , <code>announcement-countdown</code> , <code>delivery-mode-selector</code> (basic), <code>whatsapp-cta</code>	Lighthouse mobile ≥ 70 on home/PDP/collection
Localization	Markets: Kuwait (primary, KWD) · Arabic default + English <code>/en</code> · Translate & Adapt with human-reviewed AR copy · Arabic search synonyms	All pages, notifications and checkout strings in AR/EN
Catalog	Metafield & metaobject definitions (\$3.5) · products with variants (servings), 9:16 videos, allergen data · smart collections (category, occasion, same-day, under-10) · Search & Discovery filters	Every SKU has <code>fulfillment_mode</code> , <code>lead_time_hours</code> , <code>storage_temperature</code> , <code>servings</code>
Payments	Tap (KNET + Apple Pay + cards) live · COD rules · 20 test transactions incl. in-app-browser KNET return · refund test	≥ 98% paid-order capture on tests
Delivery	Zapier: zones, fees, lanes (express/same-day/pre-order), cutoffs, capacities, blackout dates · Kuwait address mapping · Order Printer kitchen ticket	Ops dry-run: 30 mock orders across lanes, zero promise conflicts
Data	GA4, Meta CAPI, Snap, TikTok via channel apps · Clarity · UTM conventions · purchase dedup verified	Events Manager match quality "Good"; GA4 purchase = Shopify orders ±5%
Reviews & messaging	Judge.me installed (import existing reviews) · Klaviyo + WhatsApp transactional templates (confirm, dispatch, delivered)	Messages fire on a real test order
QA	Device matrix: iPhone Safari + IG webview, Android Chrome + IG/Snap webview, desktop · AR/EN · each lane · gift vs self	Signed-off checklist

Phase 2: Gifting UX & AOV optimization (weeks 7-12)

Goal: lift AOV with thresholds, bundles and add-ons, and make gifting effortless.

Workstream	Tasks	KPI
Cart drawer	UpCart: progress bar (15 KD free delivery, 25 KD GWP), attach rail, slot widget placement · <code>lead-time-resolver</code> section	AOV +20-25%
Discounts	Automatic Buy X Get Y GWP · tiered discounts for bundles · Shopify Bundles: Diwaniya / Ghabga / Guests boxes	Bundle share of orders ≥ 25%

Workstream	Tasks	KPI
Gift flow	Full \$4.1 flow: card designs, message preview, recipient phone, surprise settings, "hide prices" slip · <code>_is_gift</code> hides COD	Gift orders tagged; card attach rate $\geq$ 30% of gift orders
PDP	Attach rail (complementary products) · Tabby widget ($\geq$ 15 KD) · reviews with photos · price-per-person	PDP ATC rate +10%
Payments	Tabby/Deema live (threshold) · payment customization Function (COD/BNPL rules)	BNPL share on $\geq$ 15 KD carts
Capture & flows	Popup (WhatsApp-first) · welcome, abandoned checkout, browse, post-purchase flows	Capture 6-10%; flows $\geq$ 10% of revenue
Margin model	Set thresholds and GWP cost from SKU margin + delivery cost per zone	Contribution margin per order $\geq$ target

Phase 3: Retention & scarcity mechanics (months 4-6)

Goal: make the second and fifth orders cheap. Turn the menu into an event.

Workstream	Tasks	KPI
Monthly drops	<code>drop</code> metaobject live · <code>drop-showcase</code> with countdown · "Coming next" waitlist (WhatsApp) · drop archive · VIP 24h early access	Drop-week revenue share $\geq$ 20%; waitlist → buyer $\geq$ 25%
Loyalty	Rivo/BON: Only Club tiers, points-as-KD, referrals, birthdays/occasions, review rewards · surfaces in header/PDP/drawer/thank-you	Repeat rate (60-day) $\geq$ 25%; members $\geq$ 40% of orders
VIP WhatsApp	Diwaniya VIP segment · concierge line · reserved express capacity · off-menu quarterly flavour	VIP LTV $\geq$ 3× average
Occasion engine	Saved occasions → reminder flow with pre-built boxes	Reminder conversion $\geq$ 8%
Corporate & catering	Bulk-order landing page + form → WhatsApp/CRM · (Plus: B2B catalog & net terms)	Corporate pipeline monthly
Optimization	Evaluate Rebuy (AI recs + post-purchase upsell) vs UpCart · A/B tests: threshold levels, hero mode selector, PDP video-first · split-delivery option if ops ready	Statistically significant wins only
Expansion readiness	Markets: KSA/UAE/Qatar/Bahrain (local currency, Tap local methods), cross-border shippable SKUs (chocolates, ambient boxes) only	Go/no-go per market

Appendix A: Component Build Checklist

Component	Type	Inputs	Phase	Acceptance criteria
announcement-countdown	Section (JS)	delivery_rules	1	Correct in Asia/Kuwait time; switches copy at cutoff; AR digits optional
delivery-mode-selector	Snippet + JS	Cart attributes	1 → 2	Persists mode; pre-filters same-day collection; reflected in drawer
servings-variant-picker	Snippet	Variant metafields	1	Shows size/servings/price/per-person; accessible radio group; RTL-correct
storage-badges	Block	Product metafields	1	Auto-renders correct badge set per temperature
whatsapp-cta	Block	Theme setting (number), product context	1	Prefilled localized message with product URL
attach-rail	Block	Complementary products	2	1-tap add; card opens message sheet; updates drawer totals
lead-time-resolver	Drawer section	Cart + metafields + Zapier	2	Detects all conflict types; consolidated option sets min date
gift-flow	Page/drawer steps	Cart attributes, line props	2	Validates KW phone; recipient → shipping address; surprise flags on ticket
drop-showcase	Section	drop metaobject	3	Upcoming/live/ended states; countdown; waitlist capture
loyalty-surfaces	App blocks	Loyalty app	3	Points shown as KD in 4 surfaces

Appendix B: Launch QA Checklist

- ☐ Arabic RTL: header, drawer direction, carousels, filters, cart, checkout, notifications, WhatsApp templates
- ☐ KWD shows 3 decimals everywhere (cards, PDP, drawer, checkout, emails)
- ☐ KNET success/failure/cancel return paths in Safari, Chrome, IG webview, Snap webview
- ☐ Every SKU: lane, lead time, storage temperature, servings, allergens populated
- ☐ Express lane disables at capacity and after cutoff; announcement bar matches
- ☐ Mixed-lane cart triggers resolver; calendar min-date enforced
- ☐ Gift order: recipient address/phone, card message on kitchen ticket, prices hidden on slip, COD hidden
- ☐ GWP auto-adds at 25 KD and removes below threshold
- ☐ Pixels: one Purchase per order (browser + CAPI dedup), correct value in KWD
- ☐ Lighthouse mobile ≥ 70 ; LCP $< 2.5s$ on 4G for home/PDP
- ☐ 301 redirects from legacy URLs and old domain
- ☐ Legal pages AR/EN: terms, privacy, refund/replacement (perishables), delivery policy
